

## FusionLive™ Product Description

E-Control Systems' FusionLive™ software is an enterprise, web-based, paperless solution and software package which communicates and manages IntelliSense™ and IntelliCheck™ devices. Changes or updates to any device are easily managed by automatic synchronization between FusionLive™ and any IntelliSense™ or IntelliCheck™ product. Support for third party hardware and software makes FusionLive™ the software of choice for remotely measuring anything from anywhere.

Users can choose a web and app-based, remotely hosted platform or a software-based, locally hosted platform. With the remotely hosted platform, all of your data is stored securely in the cloud. You can view your operation 24/7 from anywhere, including a computer, any iOS Apple device, or Android device. No software is required. With the locally hosted platform, you get a license for the software and all of the data is stored locally on your facility's servers. All of the monitoring can be done through local computers connected to the network.

## FusionLive™ Software Features

- ▶ Dashboard interface allowing central monitoring of IntelliProducts™ in a single view
- ▶ Management and information software allows easy integration and automation of any size operation
- ▶ 24/7 temperature reporting and alarm notification
- ▶ Provides complete asset management solution
- ▶ Executive Summary Report allows user to easily review equipment downtime, cause of downtime, and what corrective action was taken
